PUBLICATIONS OF THE COAST AND GEODETIC SURVEY.

I.—ANNUAL REPORTS.

These consist of a review of the progress of the work during the year, and an abstract of work done in the field and in the office, with sketches illustrating the progress of the work. Professional papers relating to the methods and results are appended.

II.—CHARTS.

See explanatory note, page 10.

III.—COAST PILOTS.

A series of volumes covering the coast of the United States, containing descriptions of the coast and harbors, sailing directions, and general information, etc., for the use of mariners, have been published. These are corrected to date of issue as nearly as practicable and new editions issued from time to time. See page 8.

IV.—TIDE TABLES.

The predicted time and height of the tide at the principal ports of the United States and at many foreign ports are given in these tables for every day of the year, with a table of differences, by means of which the times and heights at intermediate ports may be ascertained. Reprints of the tables for the Atlantic and Pacific Coasts of the United States are issued separately. See page 9.

Agencies for the sale of these charts, coast pilots, and tide tables have been established in many ports of the United States and in some foreign ports. See list of agencies on pages 5–7. They can also be purchased at the office of the Coast and Geodetic Survey, Washington, D. C. If ordered by mail, prepayment is obligatory; remittances should be by postal money order, express order, or certified check payable to the "Assistant in charge of the office," and not to any individual by name; postage stamps can not be accepted; the sending of money in an unregistered letter is unsafe; only catalogue numbers of charts need be mentioned. Publications mailed free of postage.

V.—PROFESSIONAL AND SCIENTIFIC PAPERS.

A List and Catalogue of all the publications of the Survey, 1816–1902, can be obtained, free of charge, by applying to the Superintendent of the Survey at Washington.

VI.—NOTICES TO MARINERS.

Corrections to be applied to charts to keep them up to date are included in the Weekly Notice to Mariners, published by the Light-House Board. Announcements of new charts, new editions of charts, charts canceled, editions canceled, and of the various new publications of the Survey are made in these "Notices."

These can be obtained free of charge from the Agencies of the Coast and Geodetic Survey, from U. S. Custom-Houses, from the Hydrographic Office of the U. S. Navy at Washington, D. C., and the Branch Hydrographic Offices, from the Light-House Board at Washington, D. C., and the Inspectors and Engineers of the Light-House Districts, or from the U. S. Consulates in foreign ports. Locations and addresses of Branch Hydrographic Offices and of Inspectors and Engineers of Light-House Districts are given in the "Notices."

Notices to Mariners and Sailing Directions (see page 9), relating to the Philippine Islands are issued from time to time at the Coast and Geodetic suboffice in Manila, P. I., and can be obtained free of charge from that office and from the Superintendent of the Survey at Washington.

EXPLANATORY NOTES.

The charts embraced in this catalogue are constructed on different scales in order to adapt them to the different conditions of navigation. The small-scale charts include large areas and are suited to offshore navigation, while those on large scale include small areas and are suited to alongshore navigation.

They are classified as follows:

SAILING CHARTS.—Chiefly on the Mercator projection. Scales from $\frac{1}{600,000}$ to $\frac{1}{3,600,000}$.

They are intended for the use of the navigator to fix his position as he approaches the coast from the open ocean or when sailing between distant coast ports. They show the offshore soundings, the principal lights and outer buoys, and such natural landmarks as may be visible at a considerable distance.

GENERAL CHARTS OF THE COAST.—Chiefly on the polyconic projection. Scales from $\frac{1}{200,000}$ to $\frac{1}{400,000}$. They are intended for coastwise navigation when the vessel's course would mostly be within sight of land and her position fixed by landmarks, lights, outer buoys, and characteristic soundings.

COAST CHARTS.—Polyconic projection. Scales from $\frac{1}{80,000}$ to $\frac{1}{100,000}$. They are intended for close coastwise navigation when a vessel's course would carry her inside outlying reefs and shoals; also for entering bays and harbors of considerable width, and for navigating the large inland waterways.

HARBOR CHARTS.—Polyconic projection. Scales from $\frac{1}{5,000}$ to $\frac{1}{40,000}$. They are intended for navigation of harbors and the small inland waterways.

The topography and hydrography of the Coast and Harbor Charts are represented in such detail that, besides their usefulness for navigational purposes, they are valuable for planning military defense, harbor improvements, and for the solution of other engineering problems. They are constructed on the polyconic projection, which is particularly adapted for the precise measurement of distances and areas.

In the catalogue the charts are arranged in geographical sequence, under the headings, Atlantic Coast, Gulf Coast, West Indies, Pacific Coast, Hawaiian and Marianas Islands, and Philippine Islands.

Under the Atlantic and Gulf Coasts appear the subheads: First, Sailing Charts; second, General Charts of the Coast; third, Coast and Harbor Charts. The geographical sequence begins at Maine and continues in regular order to Texas.

Under Pacific Coast appear the subheads: First, Sailing Charts; second, General Charts of the Coast and Harbor Charts. The geographic sequence begins at the southern end of California and proceeds northward and westward to Bering Sea.

In the scale column for charts constructed on the polyconic projection the length of a statute mile is given in inches, and it applies to the whole chart. For charts on the Mercator projection the length of a degree of middle latitude in inches is given, as the scale increases from the bottom of the chart to the top.

The limits of the charts are graphically shown on diagrams on adjoining pages. A numerical index of charts is given at the end of the catalogue, also an alphabetical index.

The aids to navigation are corrected on charts as issued to conform with latest information. The date of issue is stamped at the bottom of each chart.

OFFICIAL CHARTS AND MAPS NOT PUBLISHED BY THE COAST AND GEODETIC SURVEY.

LAKE SURVEY, WAR DEPARTMENT, Old Custom-House, Detroit, Mich.
Charts of the Great Lakes and of the Saint Lawrence River down to Ogdensburg, N. Y.

MISSISSIPPI RIVER COMMISSION, WAR DEPARTMENT, Fullerton Building, St. Louis, Mo.
Charts of the Mississippi River from the head of the passes up to the Ohio River, also a preliminary map of the river.

HYDROGRAPHIC OFFICE, BUREAU OF EQUIPMENT, NAVY DEPARTMENT.
Charts of foreign countries.

GEOLOGICAL SURVEY, DEPARTMENT OF THE INTERIOR.
Topographic and geologic maps.

GENERAL LAND OFFICE, DEPARTMENT OF THE INTERIOR.
Maps of the United States and maps of States and Territories.

TOPOGRAPHER OF THE POST OFFICE DEPARTMENT.
Post route maps of States and Territories.

The charts and maps referred to above are not furnished by the Coast and Geodetic Survey. For information in regard to them, application should be made to the authorities above mentioned.

TABLE OF SCALE EQUIVALENTS.

The following table gives the lengths of nautical and statute miles on the several scales named, these scales being the proportionate size of the chart to nature. That is, in the scale $\frac{1}{1,200}$, the chart is $\frac{1}{1,200}$ part of the actual linear dimensions in nature (or 100 feet to the inch), equal to 60.8 inches to a nautical mile, and 52.8 inches to a statute mile, and so on.

A nautical mile is a minute of an average great circle of the earth, and its length is 6,080 feet, or 1,853.2 meters. A statute mile is 5,280 feet, or 1,609.3 meters.

SCALE.	Nautical Mile.		Statute Mile.
